

Grassland Agro Sustainability Programme

Nutrias have partnered with Grassland Agro to provide a comprehensive Soil Management Plan including soil nutrient, grass VESS and Solvita testing and silage yield analysis.

Soil Testing 23,000 Acres 2022

Results from 2022 highlight there is room for improvement when it comes to soil fertility:

Joining the programme will give you the opportunity to be provided with a tailored fertiliser plan and individual advice to support you to optimise your soil fertility and cost effectively boost your output/Ha.

Types of Soil Testing you will receive:

Soil Nutrient Testing – This is method of testing is done with a soil auger to collect samples that are tested to find out the levels of N, P, K present in your farms soil along with pH. This forms the basis for your fertiliser plan.

Grass VESS Testing - This Visual Evaluation of Soil Structure assesses parameters such as compaction which has a significant influence on nutrient availability and root development.

Solvita Testing – Takes a look at the soil's biological activity. Test results include total Carbon, soil organic matter, total Nitrogen and the C:N ratio of the soil.
